The plastic submersible probe LMK 807 is designed for continuous level measurement for waste water or and different aggressive media.

Basic element of the plastic submersible probe is the flush mounted ceramic sensor, which makes cleaning easier when solid parts of the medium deposit on it.

Different cable and elastomer materials are available in order to achieve maximum media compatibility.

Preferred areas of use are

Sewage

waste water treatment
water recycling
dumpsite

Aggressive media

level measurement in most of acids
and lyes
