

Side Mounting Float Switch

visit our website

INTRODUCTION

WORKING PRINCIPLE

The reed switch relies on two basic scientific principles namely: buoyancy and magnetism.

Buoyancy causes the float (which contains a magnet) to rise with the liquid and magnetism helps open and close the switch.

A change in liquid levels raises or lowers the float up or down. The end of the pivot arm (non float side) contains a permanent magnet that can repel the switch magnet (inside the stationary 'stem' of the entire structure).

When the float magnet moves close to the switch's stationary stem, the float magnet repel the switch magnet which either opens or closes the Electrical circuit.

FEATURES

The side mounted float level sensor (FF series) are manufactured specifically for horizontal mounting on tanks or vessels. They work well as high or low level controls.

1. Both Micro-Switch types and Reed Switches are available. The MicroSwitch type is usable even at ambient temperatures of 100° C maximum.
2. Mounting flanges are custom-made. (JIS, DIN,ANSI).
3. A wide variety of floats for different solution's specific gravities (S.G.) are available.
4. Wetted parts material ranges from plastics, stainless steel, anti-corrosive and explosion proof types.

WIRING

REED SWITCH ---- 1A, 30W 220Vac/200Vdc (FF20, 45, 55, 8□)
MICRO SWITCH ---- 5A/250Vac

ANTI-CORROSIVE MODELS

FF80EFM --- PC Housing

FF81E --- Without Housing

Wetted parts : P.P.

Cable spec. : PVC 3x0.75 mm²

► Order No. FF80EFM

► Order No. FF81E

SQUARE FLANGE & TEST ACCESSORIES

► Order No. FF90CLO

1. Housing material: Aluminum (IP65)
2. Suitable S.G.: >0.65
3. Operation temp.: -20~100°C
4. Contact mode: SPDT(1C)
5. Contact rating: 5A/250Vac
6. Operation pressure: 15kg/cm²
7. Wetted parts: SUS304
8. Weight: (approx.) 1.2 kg

Drill Hole

Test Board (Optional)

Material: SS41

Please weld test board with level instrument. Without level dropping, level instrument can be checked regularly if functions well.

Check list

- Check if mechanical parts of level switch function well?
- Check if float functions well?

IMPORTANCE FOR INSTALLATION

1. SUS304/SUS316 materials are not available for corrosive application.
2. The cable duct(s) must face downward to prevent moisture seeping in.
3. The float and extension rod must be inserted into the bin completely.
4. Check the liquid's S.G. level before installation.
5. The mounting hole must be larger than the external diameter of the float. (Please refer to p2)
6. Don't mount the devices near the bin's inlet or outlet.

Typical Positioning
