NOTES:
Use G limit switch for single set point models that need this option. When selecting the manual reset option on dual setting switches (T2H), the manual reset limit switch will be on the high circuit. The low circuit limit switch must be specified by the customer.
${ }^{2}$ Changing limit switch will effect dead band; See sales drawing.
${ }^{3}$ When selecting the ' S ' adjustable differential limit switch option on a dual setting switch (T2H), a standard 'H' switch will be paired with an ' S ' switch. Dual ' S ' pricing will apply
${ }^{4}$ Add 'S' wetted material adder to this. No additional adder from armor options table.
